Education

Korea Aerospace University, Republic of Korea Mar 2021 – Feb 2027
(expected)
B.S. in Mechanical Engineering

- Overall GPA: **4.00 / 4.5** (Major GPA: **4.08 / 4.5**)
- Main Coursework: Introduction to Machine Learning, Automatic Control, Mechanical Vibrations, Data Structures and Algorithms, Probabilistic Robotics (in progress)

Research Interests

-
- On-device vision-language models for natural-language robotic mission execution
 - Perception, Prediction, and Decision Making for Autonomous Driving
 - Motion planning and path tracking for real-vehicle autonomous driving

Research / Project Experience

ASOL (Autonomous Systems and Optimization Lab) Korea Aerospace Univ.
- *Undergraduate Researcher* June 2025 – Present

- On-device VLM-based robotic mission execution**
Developed a natural-language mission execution framework that converts user commands into executable robot behaviors on a Traxxas TRX-4 & UGV
- Hallucination-aware and SLAM-grounded task planning**
Designed an Actor–Guard–Critic planning loop and integrated RTAB-Map, object detection, structured world states, and ROS2/Nav2 control for real-robot language-to-motion execution

KAUVOY Autonomous Driving Club Korea Aerospace Univ.
- *Localization Part* Nov 2024 – Nov 2025

- EKF-based localization**
Implemented Dual EKF localization on an ERP42 autonomous vehicle by fusing IMU, wheel encoder, and RTK-GPS measurements
- Autonomous parking and path tracking**
Developed and tested a real-vehicle parking pipeline covering cone perception, parking-space decision, Hybrid A* path planning, and Pure Pursuit-based path tracking

- *Team Leader* Nov 2025 – present

- Finite-State-Machine-based decision-making module for autonomous driving scenarios**

Course Project, Introduction to Machine Learning Korea Aerospace Univ.
- **End-to-End Machine Learning Classification and Regression Pipeline** Aug 2025 – Nov 2025

- Built and validated classification and regression pipelines using preprocessing, dimensionality reduction, ensemble methods, and FCNNs; achieved **0.915 macro F1** on a 4-class imbalanced classification task

Honors & Activities

-
- Finalist, **2025 College Mobility Innovation Competition**
 - Excellence Award, **Drone X AI Marketing Challenge** (2026)

Publications

- **Co-author**, "*On-Device Vision Language Model Based Natural Language Mission Execution Framework*," submitted to the International Conference on Control, Automation and Information Sciences (**ICCAIS**), 2025
- **Co-author**, "*ROS `robot_localization` Dual EKF: Verification of Localization Accuracy and Application to Autonomous Driving Path Tracking*," submitted to the Korean Society of Automotive Engineers (**KSAE**), 2025

Technical Skills

- Python, C/C++, Linux, ROS, Docker, Git
